Firefly – W6 presentation

CS4505 Software Architecture

Team 67

Finch release

- PA1, PA2, PA3
- “Hello world” equivalent
  - Only one field supported “Severity”
  - Merge library
  - Spring skeleton for server
  - Small example for Android device

Heron – progress so far

- NATS messaging for server
- Database schema
- SQLite database for storing data on Android device (still WIP)
- Merge library – full implementation of all field types from the report (not merged yet, requires refactoring in both device and server codebase as they used the hardcoded severity)
- Working on CA1, CA2 + ADRs

Heron – goals for release

- Full end to end support for all field types
- Storing data on devices and on server works
- Figure what experiments to run and do some
- No concurrency yet, DVVs deferred to Swan
- Implementing all feedback from TA in the report
- Small demo on some Android devices (WIP now)

Swan – tentative plans

- DVVs implemented
- Security measures implemented (Auth/Whitelisting)
- Full suite of experiments
- Rest of report

Thank you for your time and attention!
